

Roles, Login & Registration Process

Society App (app + website) · How users register, how roles and Tenant/Owner work, how Admin and staff are added, and how access stays secure.

- 1. Role and Occupancy: two separate ideas
- 2. Registration and login
- 3. Role-based home and role switch
- 4. Tenant and Owner: what each sees
- 5. How Admin is created
- 6. How staff join
- 7. Security rules
- 8. Data model and APIs
- 9. Edge cases
- 10. Decisions to confirm

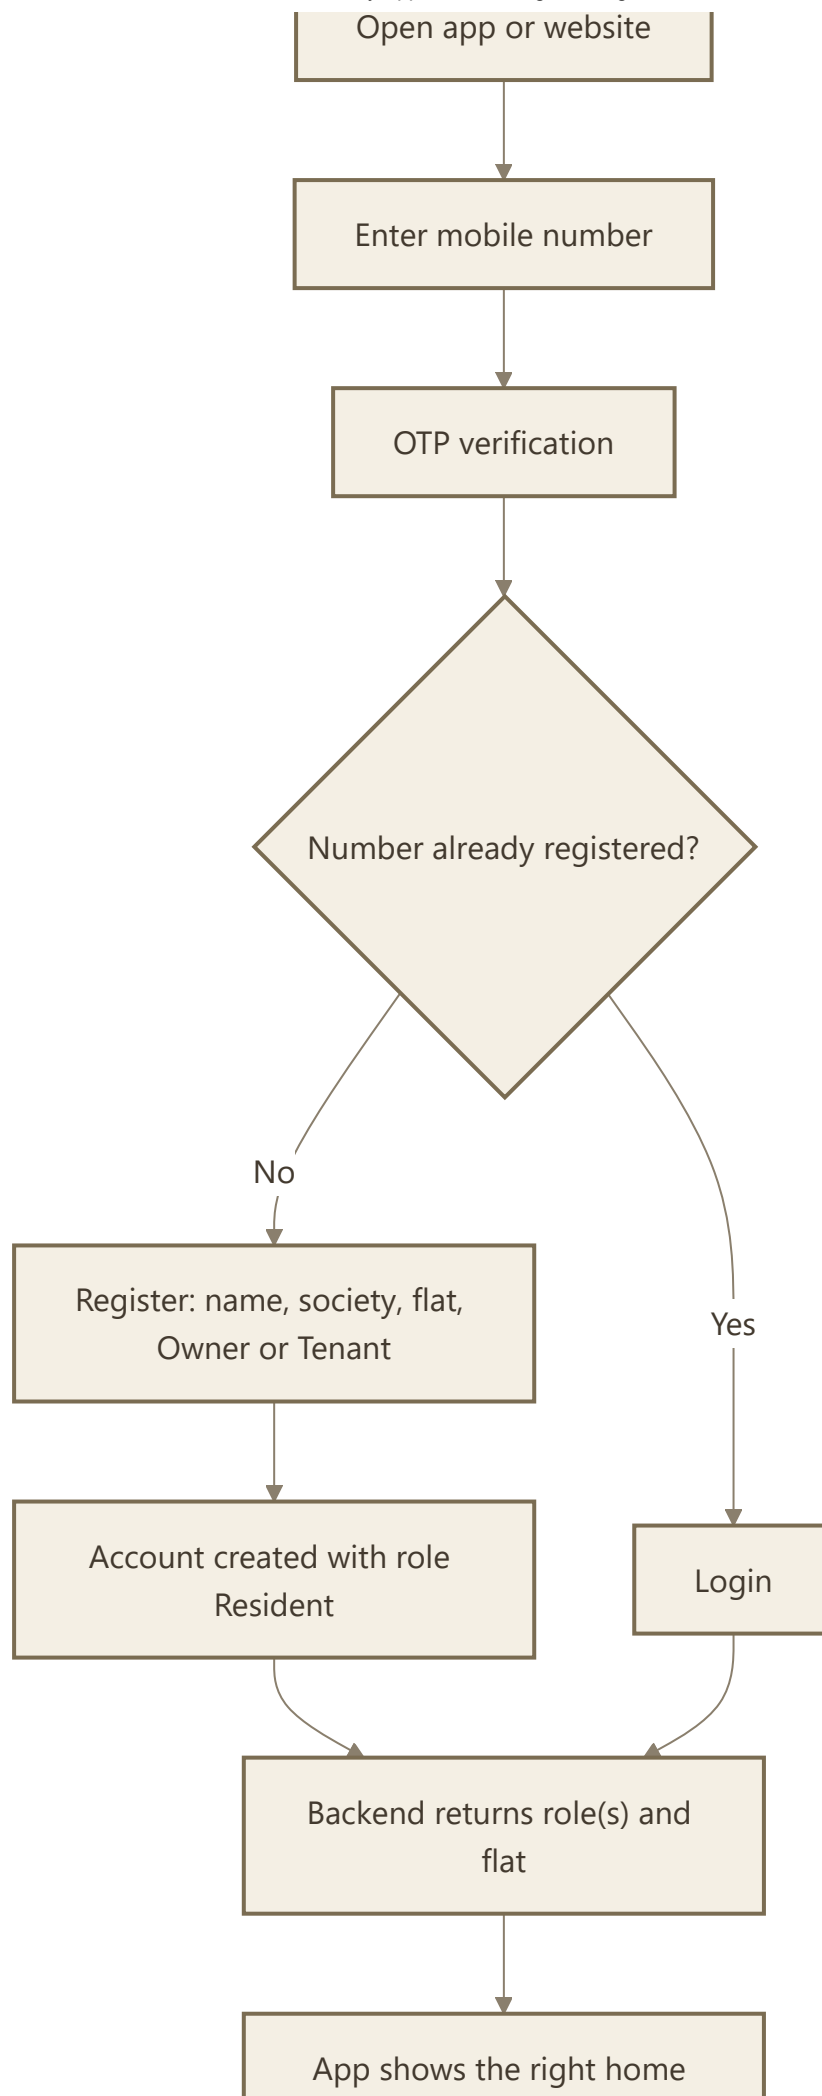

1. Role and Occupancy: two separate ideas

Concept	What it means	Who sets it
Role	What the user can do (permissions): Resident, Manager, Accountant, Committee, Guard, Admin	Admin, from the HR module
Occupancy type	The user's relation to the flat: Owner, Tenant or Family	The user at registration, verified by the owner or Admin

Tenant is not a separate role. A tenant is a **Resident** whose occupancy type is **Tenant**. Because of this, rent, agreement and "share with landlord" screens show only for tenants, and an owner sees the tenant details of the flat they own.

2. Registration and login

- 1. Everyone uses **mobile number + OTP** to register or log in. There is one login for all roles.
- 2. During registration the user picks the society, the flat and whether they are an **Owner** or a **Tenant**.
- 3. After login the backend sends the user's role and flat to the app.
- 4. The app opens the home screen that matches the role.
- 5. New users always start as **Resident**. There is no approval step. Admin can change or remove the role at any time from the HR module.

3. Role-based home and role switch

Role	Home screen after login
Resident (Owner)	Resident home: dues, complaints, visitors, notices, bookings, tenant details of own flat
Resident (Tenant)	Tenant home: rent due, society dues, agreement, issues, share with landlord
Manager	Manager home: complaint queue, booking approvals, notices
Accountant	Accounts home: bills, collections, expenses, reports
Committee	Committee home: polls, meetings, read-only reports
Guard	Gate screen: QR scan, walk-in entry, visitor log
Admin	Admin dashboard: collections, KPIs, HR module, settings

More than one role: a person can hold several roles, for example a committee member who is also an owner. A **role switcher** at the top lets them move between views. Permissions of the active role apply to every action.

4. Tenant and Owner: what each sees

Feature	Tenant	Owner
---------	--------	-------

06/10/2026, 11:32

Society App – Roles, Login & Registration Process

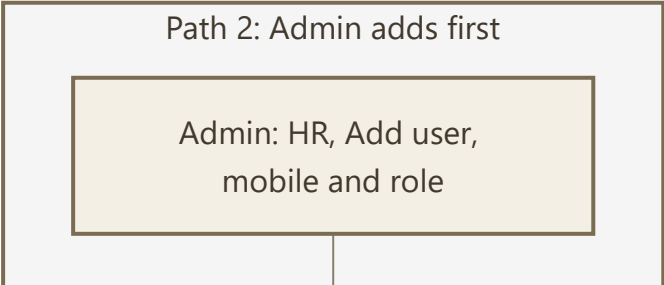

Society dues and payments	Yes (own payments)	Yes (flat dues, even if the tenant pays)
Rent, receipts, agreement	Yes, can pay and download	Sees rent status and agreement of own flat
Share with landlord	Yes, tenant chooses what to share	Receives a read-only view
Tenant details of the flat	–	Yes: name, family, agreement dates, police verification
Raise issues	To Society or Landlord	To Society, and sees issues sent to them
Visitors, bookings, polls	Visitors and bookings; polls as per society rule	All, including voting

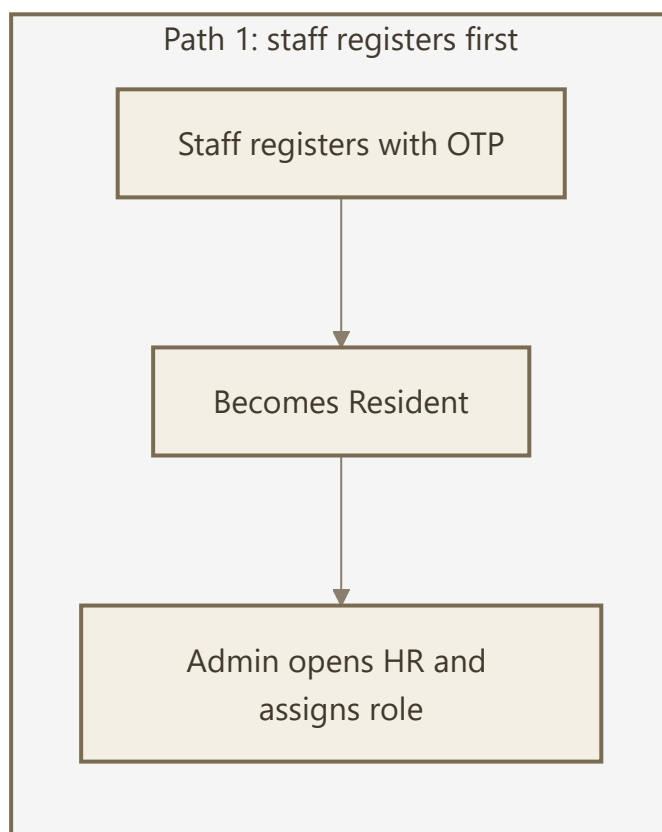

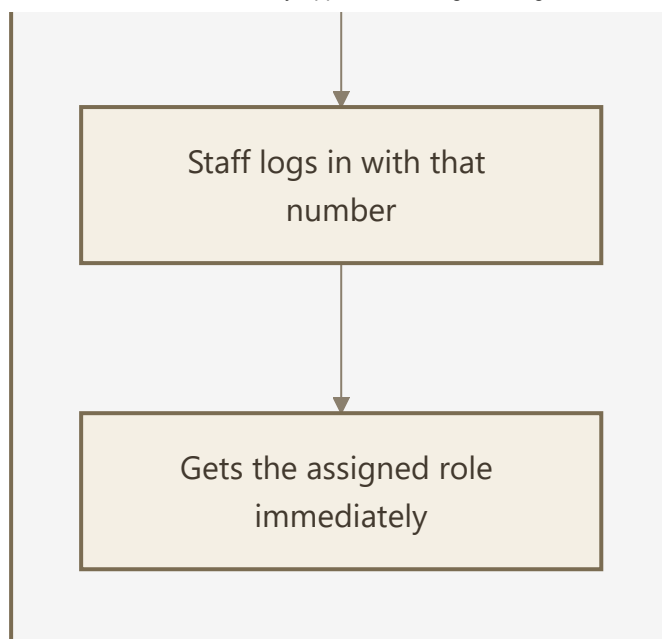

Privacy: a tenant's rent and payment details are private. The owner or Admin sees them only if the tenant shares them, or if the society rules require it (for example the agreement and police verification).

5. How Admin is created

- Admin **cannot** be created from public registration. Otherwise anyone could make themselves Admin.
- When a society is onboarded, the platform owner (**Super Admin**) sets the first Admin by mobile number.
- After that, an Admin can give the Admin role, or any other role, to more people from the **HR module**.
- The last remaining Admin cannot be removed or demoted. The system blocks it.

6. How staff join (Guard, Accountant, Manager)

Path 2 is better for staff such as guards and accountants, because the role is ready on their first login. It uses an invite record that is matched by mobile number and expires if unused.

7. Security rules

- **The backend checks permissions on every API call.** Hiding a button in the app is not enough.

- 06/10/2026, 11:32Society App – Roles, Login & Registration Process
- When a role changes, the old session is refreshed so the user gets the new role at once. A removed user is logged out.
 - Every role change is saved in the **audit log**: who changed it, for whom, and when.
 - OTP has a retry limit and expiry. Sessions use short-lived tokens with refresh.
 - Shared links have an expiry, can be view-only, and can be revoked by the owner of the data.
-

8. Data model and APIs

- users(id, name, phone, email, status)

-- ACTIVE / REMOVED

user_roles(user_id, society_id, role_id)

-- default: Resident

flat_members(user_id, flat_id, type, verified_by)

-- type: OWNER / TENANT / FAMILY

staff_invites(id, society_id, phone, role_id, expires_at, used)

roles(id, society_id, name) permissions(id, code) role_permissions(role_id, permission_id)

audit_log(id, actor_id, action, target_id, at)
- POST /auth/otp POST /auth/verify POST /auth/register GET /me (role, flats, occupancy)
 - POST /me/switch-role GET /hr/users POST /hr/users PUT /hr/users/:id/role DELETE /hr/users/:id/role DELETE /hr/users/:id
-

9. Edge cases

Situation	What the system does
Tenant moves out	Owner or Admin ends the tenancy. Occupancy type is removed, rent screens hide, shared access is revoked, history stays for records.
New tenant takes the flat	New tenant registers and selects Tenant. Old tenant data is not visible to them.
Owner sells the flat	Admin transfers the owner record. Past dues stay linked to the flat.
User changes mobile number	Admin updates the number after identity check. The role stays unchanged.
Staff leaves	Admin removes the role (back to Resident) or removes the user. Sessions end.
Wrong flat chosen at registration	User can request correction. Admin fixes it in HR.

10. Decisions to confirm

- **Society code:** should registration need a society code, or can anyone pick the society? A code keeps outsiders out.
- **Tenant verification:** should the owner or Admin confirm a tenant claim, or is self-declaration enough?
- **Voting by tenants:** can tenants vote in polls, or only owners?
